Fawns/Doe:	0.80	Fawns:	36.5%	Fawns: 679
Total:				1,863

Biologist Comments:

- The population density estimate has increased from 2.5 acres per deer to 1.49 acres per deer over the last year.
- Survey results indicate a high fawn recruitment this year (80% of does have fawns whereas the 5-year average is 60%).
- Survey results estimate 679 fawns in Garden Ridge this year. A high fawn recruitment will result in a larger rate of increase on the population going into next fall.
- White-tail deer have fawns at an approximate 50/50 ratio of males to females, thus we can estimate that there are about 340 doe fawns this year.

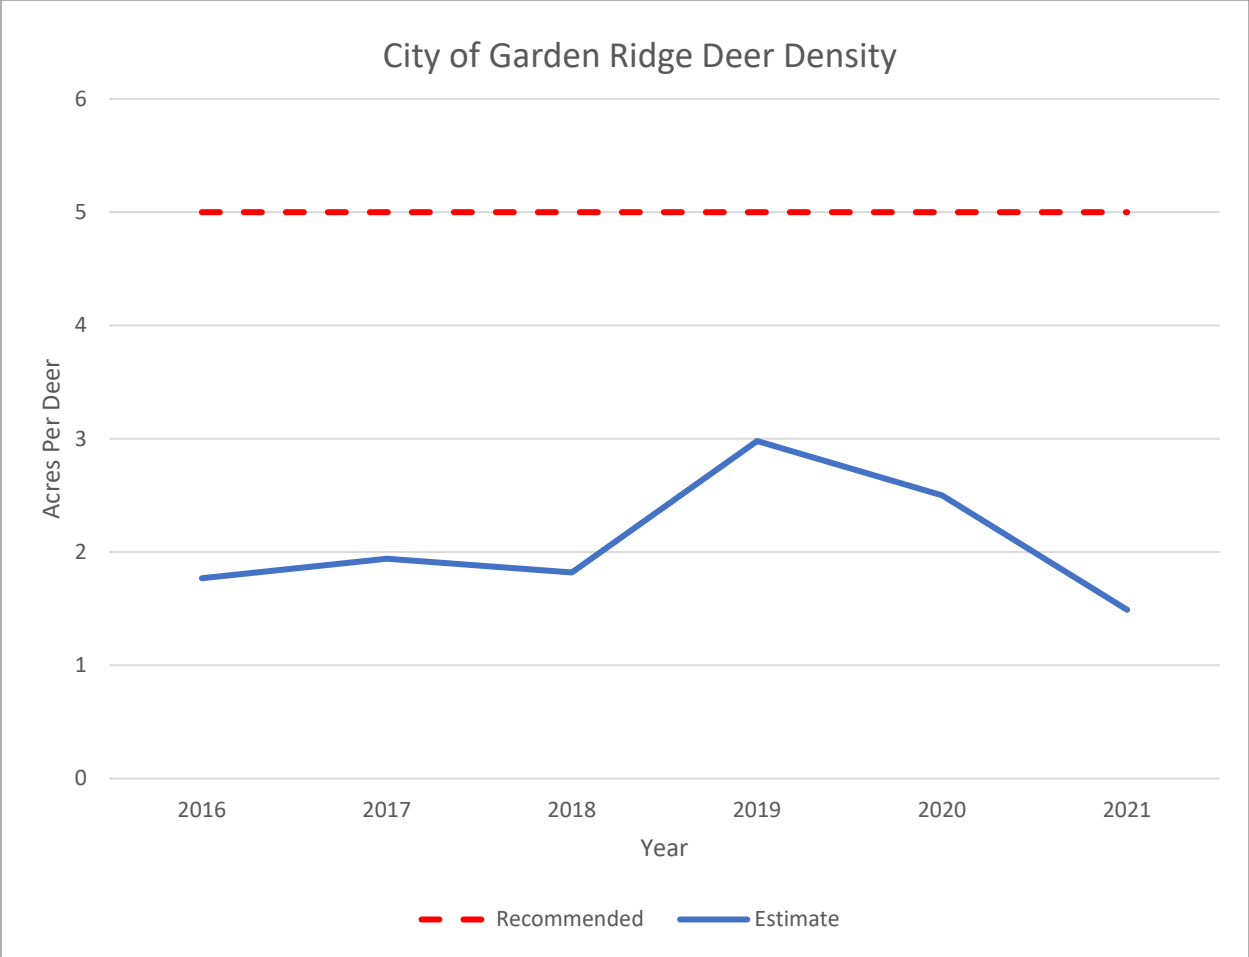

Figure 1. This graph shows the property deer density over time. The blue line represents the estimated deer density based on ranch surveys each year. The dashed red line represents the recommended density for the area based on the overall carrying capacity of the landscape.

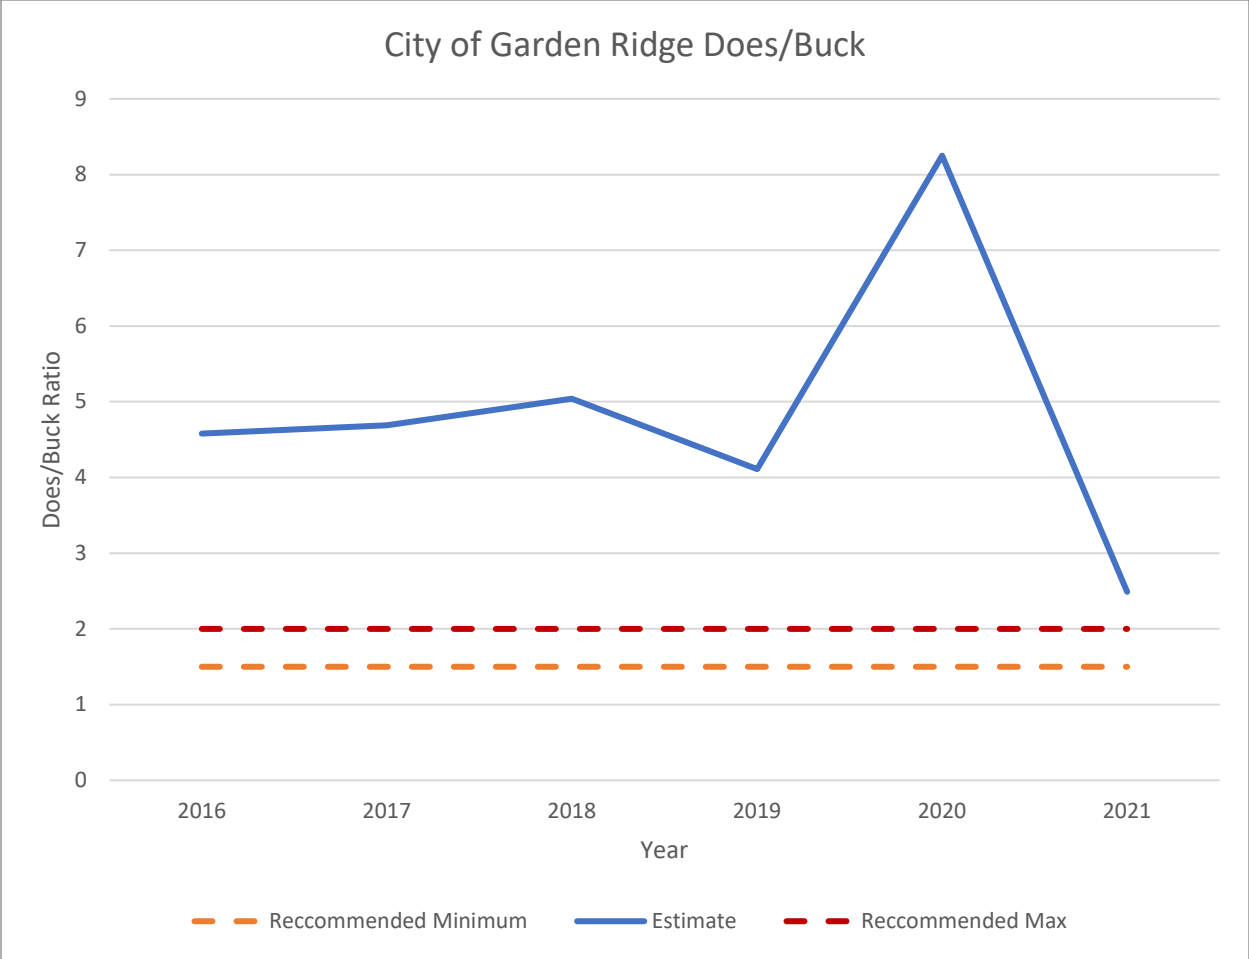

Figure 2. This graph shows the estimated does per buck ratio over time. The blue line represents the does/buck ratio based on annual deer surveys conducted on the ranch. The two dashed lines represents the upper and lower bounds of the recommended doe/buck ratio for our area. The orange dashed line represents the minimum while the red dashed line represents the maximum.

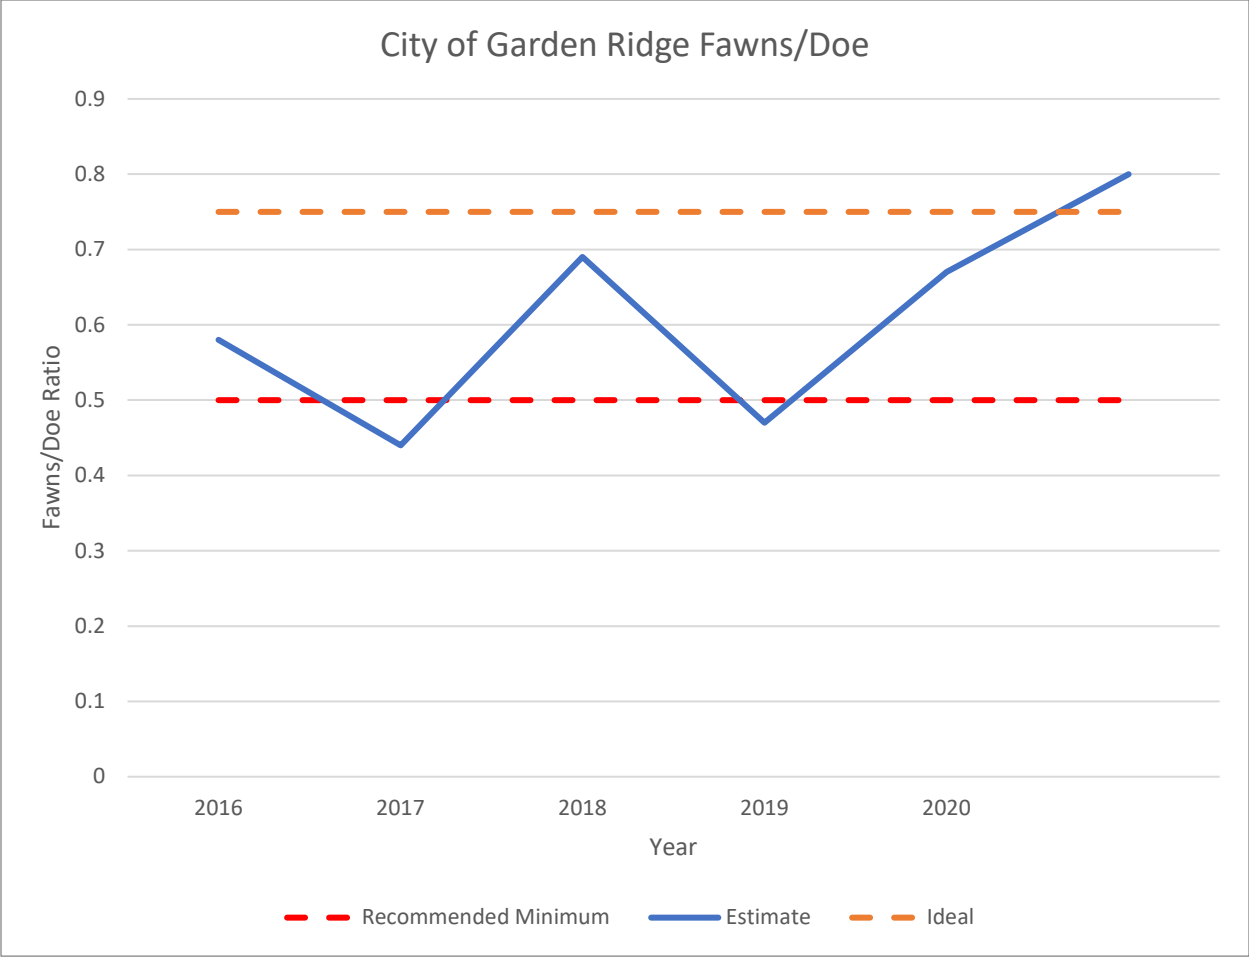

Figure 3. This graph shows the estimated fawn to doe ratio over the years. The blue line represents the fawns per doe ratio based on annual deer surveys conducted on the ranch. The orange dashed line represents the recommended minimum on the average year. While the red dashed line represents the ratio that would occur under ideal conditions.

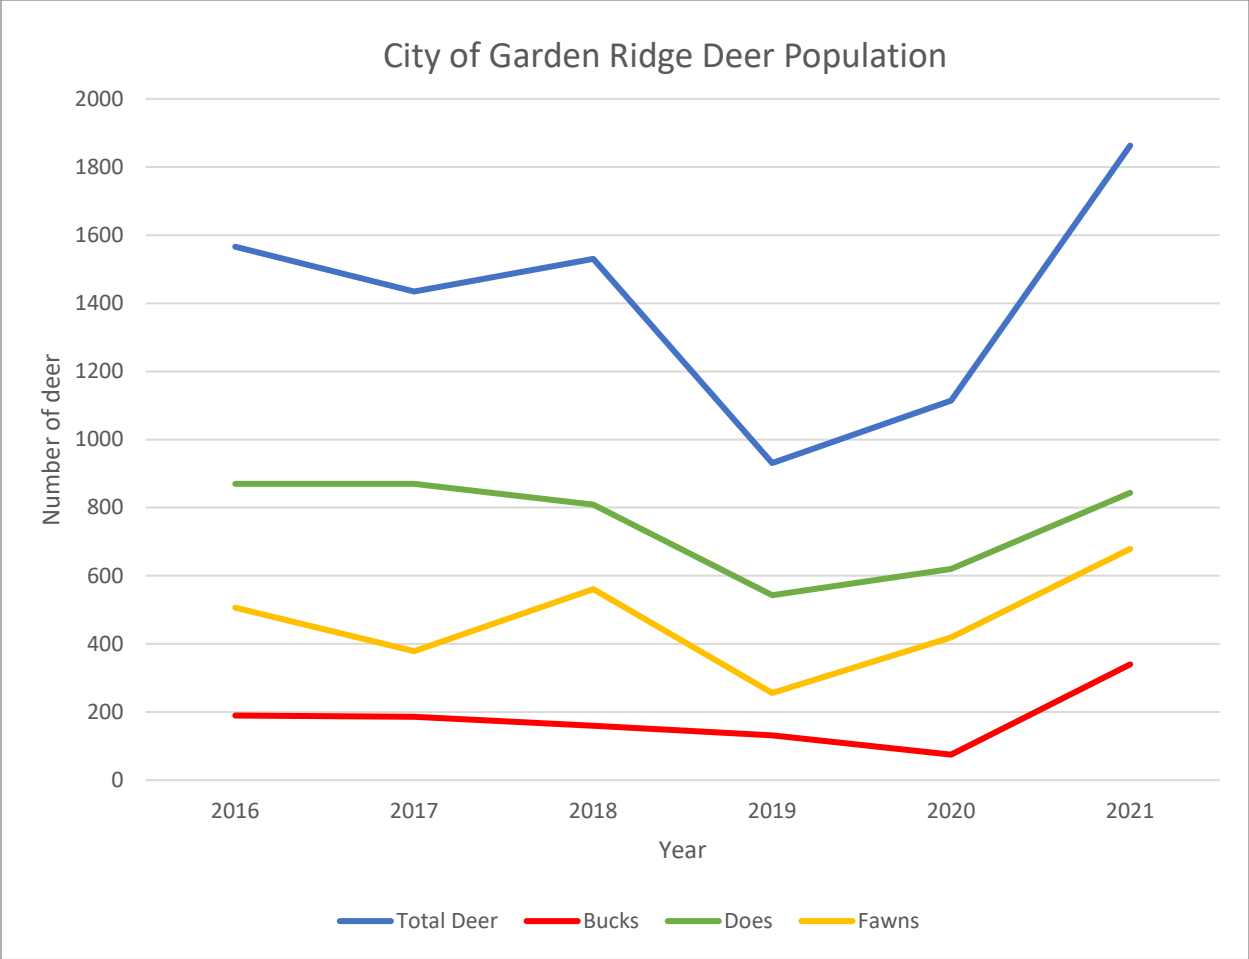

Figure 4. This graph just shows total *estimated* number of deer and their breakdown over time. The blue line represents the estimated total number of deer. The red line represents bucks, green represents does, and yellow represents fawns. Reminder that this is just an estimate of the number of deer and should not be viewed as an absolute number of deer.

2021 Garden Ridge Deer Survey Results

Benjamin Olsen, Wildlife Biologist
Texas Parks & Wildlife Department

Biologist Comments on number of deer that could be removed:

- Based on data and population analysis, at least 450 deer would need to be removed from the population to avoid any decrease or increase in the estimated deer population going into next fall. **(This is not a recommendation, just additional population information for the committee)**
- Last year, it was projected for at least 300 deer to be removed to maintain the population as is.
- See table and graph below for a breakdown of how any number of deer being removed could alter the estimated deer population.
- Fall 2022 estimates are factoring the average Fawn: Doe ratio (fawn recruitment) over the last 5 years, which is 0.61 or 61%.
